

TOREON

Software Builders - Security Services

◆ A TOREON ADVICE SERVICE ◆

YOUR COACH IN DIGITAL SECURITY

Secure Development

A TOREON ADVICE SERVICE

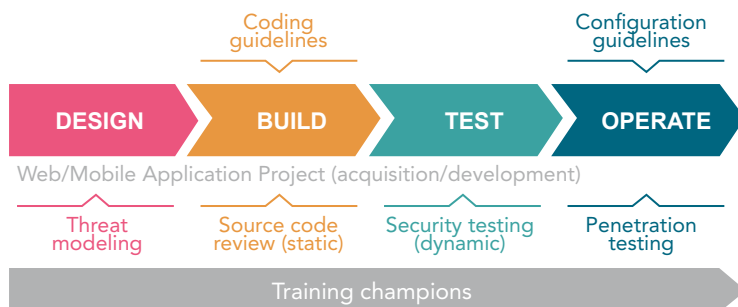

For Independent Software Builders who want to get a better grip on their cybersecurity and gain more visibility into the security of their product(s), development activities and development infrastructure.

Our services help Software Builders to get a better view on their security posture. Our solution is a best of breed combination of technological and governance advice, tailored to developers, which can focus on different

security domains depending on your needs. Our approach is based on OWASP's Software Assurance Maturity Model, which gives a full view of the security of all elements of an Software Builders core service.

◆ Secure Development Processes:

Implementing Secure Software Development LifeCycle (S-SDLC) best practices through coaching of development teams.

◆ Secure Infrastructure:

Improving the security of the MS Azure development infrastructure.

◆ Secure Product:

Validating the security of the developed digital solution, through Threat Modeling and Penetration Testing.

◆ Secure Organisation:

Demonstrating compliance with security requirements (e.g. ISO27001, NIST, CIS20,...) to interested customers.

Start assessing your security maturity, define your priorities and empower your security defenders with best practices to keep one step ahead in building resilient digital solutions.

OWASP SAMM

The OWASP SAMM™ (Software Assurance Maturity Model) is a community-led open-sourced framework that allows teams and developers to assess, formulate, and implement strategies for better security which can be easily integrated into an existing organizational Software Development Life Cycle (SDLC).

Shift Left:

Security must be integrated in all phases of the software development lifecycle.

A SAMM roadmap has the benefit of making security maturity in the Software Development Life Cycle measurable, comparable and actionable. The current position can be compared to future and past levels, as well as with competitors or benchmarks.

Toreon is a leader in the development and use of OWASP SAMM and in promoting a secure SDLC in general. Our people have been closely involved in the creation of the OWASP SAMM v2 framework, providing one of the lead project managers.

Secure Development

A SUBSIDIZED SECURITY JOURNEY

The Flemish Agency for Innovation & Entrepreneurship (VLAIO) wants to boost the Cybersecurity (CS) maturity of Flemish SMEs. Toreon is one of the recognized service providers where you can apply for 45% subsidies to support your Security Journey. Toreon has created a unique track for Software Builders.

The purpose of our subsidized security tracks is to mitigate the most important cybersecurity risks as well as to guide your software development teams to a higher maturity with respect to 'secure development best practices'.

OUR SUBSIDIZED TRACK INCLUDES:

◆ Analysis phase:

We start with a Penetration Test and OWASP SAMM assessment to validate the security of your main product & infrastructure and the maturity of your secure development best practices.

Analysis phase

◆ Reporting & Roadmap:

After the initial assessment, we create a roadmap to structurally increase the secure development maturity.

Reporting & Roadmap

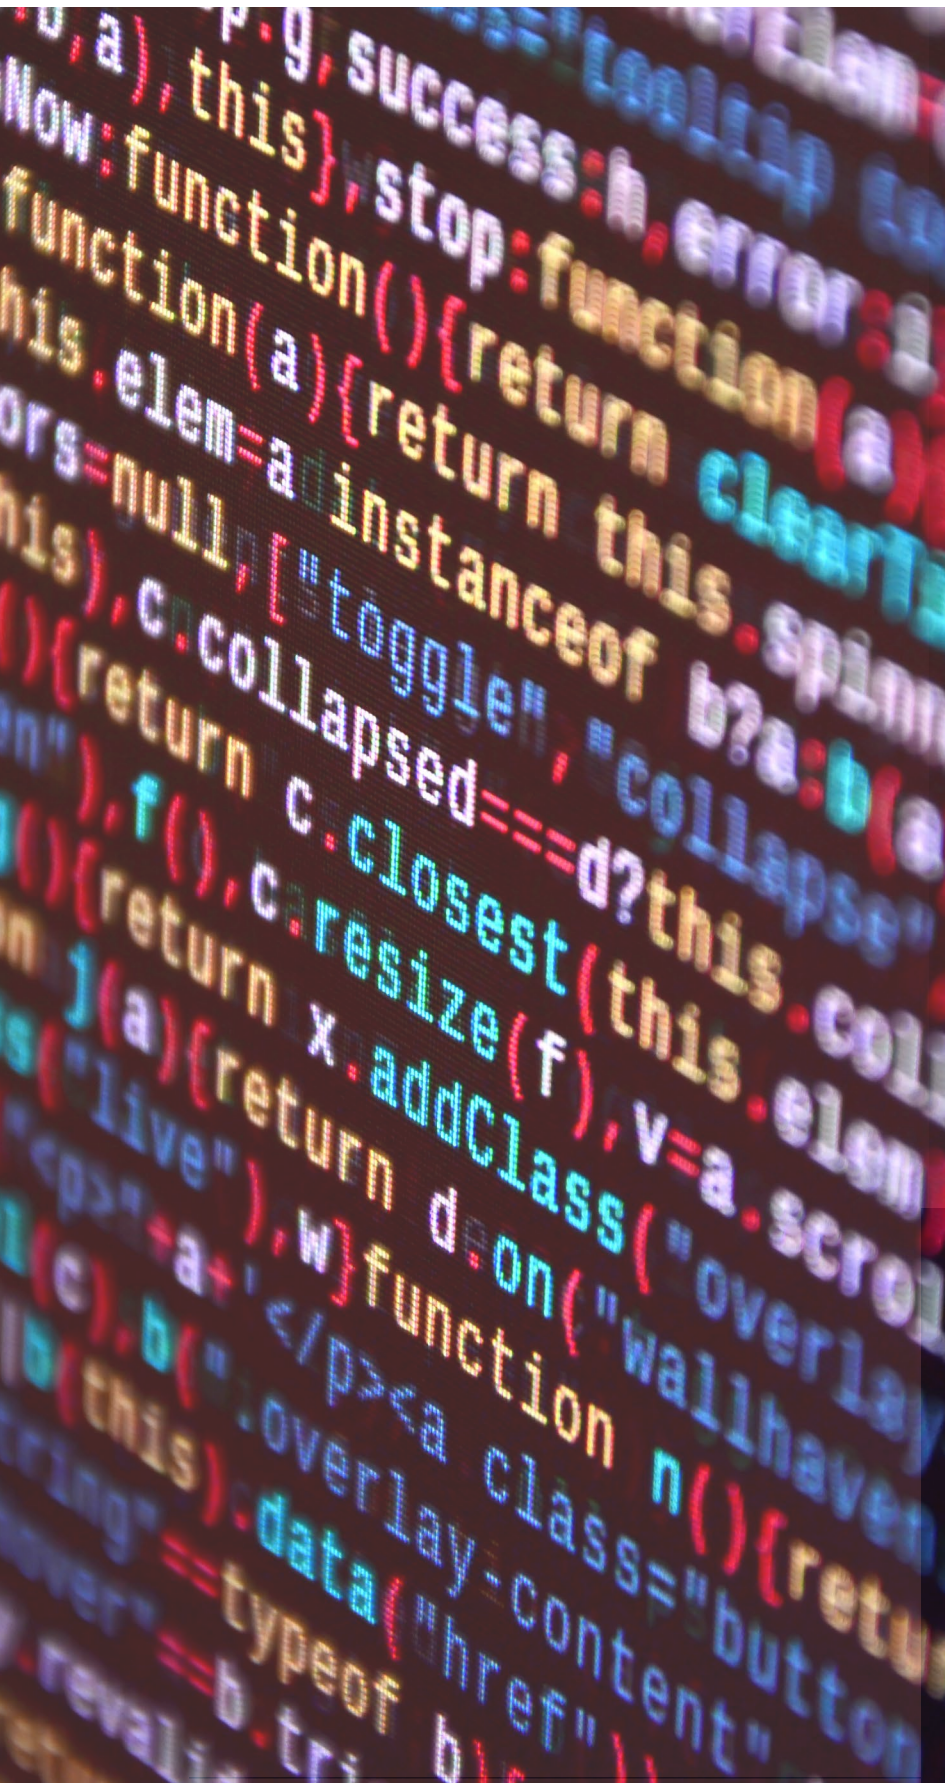

◆ The 'Journey':

Our approach to improvement is coaching. We transfer knowledge and help the organization to internalize the security principles, thus achieving higher maturity.

The 'Journey'

Thanks to our credit system, you enjoy a strong degree of personalization within your security track. Our credit system translates the fixed budget into points that can be used for different types of cybersecurity advice and activation.
